To Whom It May Concern:

Aero-Mach Labs, Inc. is a member of the Aeronautical Repair Station Association (ARSA). We primarily repair, overhaul and manufacture aircraft instruments.

Product liability insurance premiums have risen sharply in the last few years for us, so it was intriguing to me when ARSA sent us a flyer regarding a new concept in product liability insurance. It involved creating a new insurance company, owned by those being insured, to try to take advantage of our common repair station business interest and leveraging that commonality to obtain a much better risk for insurance purposes. We were not pooled with the airlines, flight schools, charter operators and other companies that had other insurance needs and requirements.

This new avenue named the Aviation Alliance Insurance Risk Retention Group (AAIRRG) had never existed before. I feel confident that the founding members, board of directors, and management companies have put together an affordable solution to provide excellent insurance coverage at a much lower cost.

It would certainly be worth your time to explore this new and different approach to meeting your insurance needs. We did, and so far we have cut our insurance premiums by thirty five percent. That is a significant savings.

Sincerely,

A handwritten signature in black ink, which appears to read "Charles Perkins". The signature is written in a cursive style.

Charles Perkins
President, Aero-Mach Labs, Inc.
